

Datanova Scientific is a young and innovative company that specializes in big data, machine learning, semantic technology, and artificial intelligence. We aim to advance the fundamental state of big-data science.

The company culture focuses on high standards, mentorship, and a flat organizational structure. The work environment is productive, supportive, and apolitical. We offer benefits such as healthcare and retirement.

Datanova is a great place to start a career. We work in high-demand technologies and give new engineers and developers the responsibility and support to grow quickly.

We are looking for engineers and developers who enjoy working with technology, like problem solving, and have an excellent work ethic. Prior experience is not required.
